

## Anti Smudge Coating

Anti Smudge Coated substrates or objects will not allow water leaves streak and sheen that can block our vision but it would be formed into small droplets and bead off the surface.

### **What is anti smudge coating?**

Hydrophobic coating is also known as easy cleaning coating. It provides an 'easier to clean' surface to the coated substrates or objects. However, bear in mind that, coated surface is not self-cleaning and just easier to clean.

### **Substrate Applicable**

-Polycarbonate	-CR39	-Glass
-Zeonex/Topas	-PC-ABS	-ABS
-Ultem	-ADC200	-Steel (Product Level Protection)

### **Water repellent**

It does not mean that water cannot be formed on the hydrophobic coated surface but this coating can minimize the problem of moisture buildup. For example, a hydrophobic coated substrates or objects are not allow water leaves streak and sheen that can block our vision but it would be formed into small droplets and bead off the surface.

### **Oil repellent**

It can repel skin oil, sweat, lotions, fingerprint, grease and more to ensure coated objects easier to clean and wipe without leaving any residue.

### **Easily to clean dirt and dust**

Obviously, we no need for aggressive cleaner to wipe and clean the surface of coated substrates or objects.
